SUMMARY

Developer with over 1.5 years of experience specializing in React, JavaScript, and Material UI, and hands-on exposure to Elastic search and Docker. Possesses strong problem-solving skills, thrives in agile collaboration, and is driven to deliver scalable, production-ready solutions.

EXPERIENCE

Esko | Software Engineer I | Aug 2025 – Present

- Designed 20+ reusable modular React components along with its Unit testing which provided standard for Esko design system - Refactored critical components to boost performance by 20% and reduced API calls by 50%, directly improving app speed and cost efficiency.
- Assumed ownership of sprint planning and backlog grooming sessions, ensuring consistent workflow, effective prioritization, and seamless cross-functional team collaboration.
- Led a team of 5 in the Esko Innovation Days Contest, resulting in the implementation of 7 new features that increased customer satisfaction by 15%.

Esko | Software Engineer Trainee | Aug 2024 – July 2025

- Handpicked as one of the few members for a **pilot project** focused on continuous improvement through weekly releases, which established a new way of working in the Esko R&D department
- Authored and maintained **200+** comprehensive unit and integration test cases for backend APIs utilizing Mockito, significantly improving code reliability and ensuring robust test coverage.

Esko | Software Engineer Intern | Feb 2024 – July 2024

- Contributed to the gradual migration of a legacy Marionette Backbone.js application to React, minimizing disruption while modernizing the tech stack.

EDUCATION

B.E in Computer Science & Engineering | Sri Ramakrishna Engineering College

2020 – 2024 - CGPA: 8.72

SKILLS

- Programming Languages - Javascript (ES6+) , SQL , HTML & CSS
- Frameworks - React JS, Material UI , Rest APIs , Mockito , Jest
- Collaboration Tools - Jira , Git , Github , Maven , Figma , OpenSearch Dashboards, Docker , MS Office Suite
- Agile Project Management - Scrum Ceremonies , Sprint Planning , Backlog Management , Jira Boards
- Soft Skills - Leadership and mentoring , Project ownership and accountability , Cross-functional collaboration

PROJECTS

React AI Prototypes (B.E)

- Developed a real-time vehicle and object detection system leveraging advanced computer vision algorithms to monitor traffic flow and identify various objects within a designated area
- The solution not only detects and tracks vehicles and other entities as they move but also visualizes their trajectories through an interactive, web-based dashboard
- This intuitive interface enables users to observe traffic patterns and object movements in real time, providing a robust and efficient tool for practical, real-time monitoring and analysis of vehicular and object activity

Python based AI Prototypes (B.E)

- Developed a machine learning system to automatically detect Autism Spectrum Disorder (ASD) by identifying the most significant diagnostic traits
- Evaluated and compared several classification algorithms, with ensemble methods achieving superior accuracy in early ASD diagnosis.
