SUMMARY

Full-Stack Software Engineer with 2+ years of experience building web applications with **React**, **Java**, and **Spring Boot**, developing **agentic AI** systems with **LangGraph** and **MCP**, and securing applications with **Veracode**. Strong problem solver who thrives in agile teams and delivers scalable, production-ready solutions.

EXPERIENCE

Software Engineer I Aug 2025 – Present
Esko

- Built MCP tools in Python for a multi-agent AI system, enabling specialized agents coordinated by an orchestrator agent to execute platform operations.
- Implemented Spring Boot REST APIs for the customer onboarding and subscription flow, enabling pre-sales teams to onboard customers and provision site-level subscriptions through integration with the internal IAM service.
- Developed 20+ reusable React components with unit tests, setting the standard for the Esko design system.
- Led a team of 5 at Esko Innovation Days, delivering 7 new features that increased customer satisfaction by 15%.
- Strengthened product security using Veracode, resolving 100+ vulnerabilities from Static Application Security Testing (SAST) and Software Composition Analysis (SCA) scans.
- Took ownership beyond development: served as Scrum Master for sprint planning and backlog grooming, managed product translations, and drove cross-functional collaboration across teams and components.
- Developed 25+ end-to-end UI test cases using Selenium with Java.

Software Engineer Trainee Aug 2024 – Jul 2025
Esko

- Handpicked as one of a few engineers for a pilot project focused on continuous improvement through weekly releases, which established a new way of working in the Esko R&D department.
- Refactored critical components to boost performance by 20% and reduce API calls by 50%, directly improving app speed and cost efficiency.
- Developed public APIs for core platform features, enabling other microservices to consume them.
- Authored and maintained 200+ unit and integration tests across backend (JUnit, Mockito) and frontend (Jest), significantly improving code reliability and test coverage.

Software Engineer Intern Feb 2024 – Jul 2024
Esko

- Contributed to the gradual migration of a legacy Marionette.js application to React, minimizing disruption while modernizing the tech stack.

SKILLS

Languages — JavaScript (ES6+) | Java | Python

Frontend — React.js | Material UI

Backend — Spring Boot | REST APIs

Agentic AI — LangChain | LangGraph | CrewAI | MCP (Model Context Protocol)

Testing — JUnit | Mockito | Jest | Selenium

Tools — Git | GitHub | Veracode (SAST, SCA) | Docker | Maven | Jira | Confluence | OpenSearch Dashboards

Methodologies — Agile | Scrum | Sprint Planning | Backlog Grooming

EDUCATION

B.E. in Computer Science and Engineering 2020 – 2024
Sri Ramakrishna Engineering College CGPA: 8.72/10
